ABSTRACT

In order to assess the probable impact of the June, 1976 loss of veteran's benefits for Korean-era veterans, Santa Ana College administered a questionnaire to 4,350 veterans enrolled in the spring of 1975. The questionnaire was returned by 1,299 veterans, a 29.9 percent rate of return. Of those responding, 469 veterans (36.1 percent) were discharged before June, 1966, and will lose their benefits in June, 1976. Of the 469 veterans losing benefits, 269 (57 percent) stated that they plan to enroll in fall, 1976, as compared to 496 (59 percent) of the 830 veterans with continuing benefits. Although the reported data indicates that veteran enrollment will not be greatly affected with regard to students already enrolled, the potential market of veterans will decrease. An estimated drop of approximately 500 veterans in the fall of 1976, and an additional 400 drop in the spring of 1977 is projected. The main impact will be felt in work experience and television courses where, respectively, 82 percent and 68.5 percent of the enrolled students were veterans in the spring of 1975. However, the future enrollment of veterans will be sensitive to the job market and Congressional action with regard to benefits, and could change in different directions. The questionnaire is appended and responses are tabulated. (NHM)

Future Veteran Enrollment

How Long? How Deep?

INTRODUCTION

With the current large veteran enrollment in colleges and universities, and the Korean-era veteran benefits coming to a close (those released before June 1966 will lose their benefits in June 1976), the question of what effect the loss of these benefits will have on future veteran enrollment is raised. A sharp drop in enrollment could create problems for college policy makers in planning for future enrollment and adjusting budgets for loss of income from smaller ADA figures.

Santa Ana College administered a questionnaire to 4,350 veterans enrolled in the Spring of 1975. The main purpose of this questionnaire was to determine the future enrollment plans of veterans. The data is summarized in Tables 1 and 2. The questionnaire was returned by 1,299 veterans. This represents a 29.9% rate of return. Of those responding, 469 (36.1%) veterans were discharged before June 1966, and will lose their benefits June 1976.

Of the 469 veterans discharged before June 1966, 269 (57%) stated they plan to enroll in Fall 1976 after their benefits stop as compared to the 496 (59%) reported by 830 veterans with continuing benefits.

This was not what was expected. It was generally believed that the return of veterans losing their benefits would decrease at a faster rate

than those veterans whose benefits continue. It was possible, however, that Korean-era veterans were not completely aware of the cut-off-date, but the Veterans' Office believed this was not the case.

Although the reported data indicates that veteran enrollment will not greatly be affected by students already enrolled, the potential market of veterans will decrease. 153 (37%) of the responding new veterans (Tables 3 and 4) were veterans who were discharged before 1966. Of the 1505 new veterans for Spring 1975, a projected 557 were veterans whose benefits will discontinue in the Fall 1976.

All things remaining normal, an estimated drop of approximately 500 veterans in the Fall 1976, and an additional 400 drop in the Spring, 1977 would be projected at Santa Ana College based on the reduced market.

It should be noted a large number of veterans live in Orange County (62,000), and with a changing job market, and what Congress may do with the veteran benefits in question, the future enrollment of veterans could change in different directions.

The main impact of the projected drop in veterans would be experienced in work experience and television courses where, respectively, 82.0% and 68.5% of the students enrolled in these courses in the Spring 1975 were veterans.

DISCUSSION OF DATA AND FINDINGS

Exhibit 1 is a copy of the veterans' questionnnaire mailed to all veterans enrolled at Santa Ana College during the 1975 Spring Semester. The total veteran enrollment during this semester was 4,350 students. From this population, 1,299 veterans returned a completed questionnnaire. This

is a 29.9% rate of return. Therefore, the statements of the students in the sample can be considered statistically valid and represent the entire population with the maximum probability of error being 3%.

The organization of the Discussion of Data and Findings is arranged to first discuss each of the questions individually, then to synthesize the major observations of each question.

Dates Released From Service (Question 2)

The dates that veterans were released from service are divided into eleven groups. The first group includes all veterans discharged before June 1966. The next ten groups are veteran discharge dates divided into one-year increments from June 1966 to June 1975. The headings in Tables 1 and 2 show this grouping. It can be seen from the data in Table 2 that 36.1% of veterans in this survey were discharged before June 1966. These veterans are scheduled to lose their educational benefits June 1, 1976. The number of veterans in the other 10 groups is approximately the same except for the last group (discharge after June 1975), which has only 10 veterans.

Approximately How Many Months of Benefits Have You Used? (Question 3)

For purposes for planning veteran enrollment, the number of months of benefits that veterans reported that they had used was converted into the number of months of benefits left. A study of the data in Table 2 shows that the majority (85%) of veterans have eleven or more months of benefits

left. This holds true for all eleven groups shown in Table 2. Tables 3 and 4 show that the majority (55.0%) of the veterans discharged before June 1966 have completed just one or two semesters. In addition, 88.4% of these veterans have 16 or more months of benefits left. It appears unlikely, therefore, that over 88% of these Korean-era veterans will be able to fully utilize their education benefits.

How Many Total College Units Have You Completed? (Question 4)

An analysis of the data in Table 4 shows that the number of units completed by veterans is consistent with the number of semesters they have attended the college.

How Many Semesters Have You Attended Santa Ana College? (Question 5)

Statistics in Table 4 show that 53.4% of veterans have been enrolled at Santa Ana College for only 2 semesters. Also, 74.5% of the veterans have been at Santa Ana College for two years (four semesters). These numbers appear to be consistent with the persistence rates that one would expect to observe of all students at Santa Ana College.

How Many More Semesters Do You Plan to Attend Santa Ana College? (Question 6A)

The median number of additional semesters that veterans plan to

enroll at Santa Ana College is two. Approximately 60% of veterans will be enrolled at Santa Ana College for 2, 3, or 4 additional semesters.

Which Semesters Do You Plan to Enroll? (Question 6B)

Question 6B is the most important question in this survey. Its main value is in predicting veteran enrollment in future semesters. Data in Table 2 shows that 90% of the veterans enrolled at Santa Ana College plan to enroll in the Fall Semester, and 84% in the Spring 1976 Semester. In both of these semesters, veterans discharged before June 1966 plan to enroll at higher rates than veterans discharged after June 1966. In Table 4 these statistics are presented. The higher enrollment rates seem to indicate that Korean-era veterans are aware that their benefits expire in June 1966 and wish to utilize their benefits within the next year.

To fortify this observation further, a smaller percentage of veterans discharged before June 1966 will continue their enrollment in the Fall Semester 1976 than veterans discharged after June 1966. In other words, 57.4% of the Korean-era veterans state that they will enroll in this semester, while 59.8% of all other veterans currently enrolled at Santa Ana College will enroll in the Fall 1976 Semester.

It is also interesting to note, as shown by the data in Table 4, that the persistence rates for veterans group by semesters completed at SAC are approximately the same. This is true for Korean-era veterans and post-Korean-era veterans. The persistence rates do decline slightly as the number of semesters completed by veterans increases, but it is not as large of a decline as would be expected. This is possibly resultant from the majority of veterans being part-time students, thus taking more than

four or five semesters to complete their educational objectives.

The statistics in the tables presented in this report show that 84% of the veterans currently enrolled at Santa Ana College plan to continue their enrollment for two more semesters. With Korean-era veteran benefits expiring in June 1976, it is difficult to determine whether or not these veterans will desire to continue their education in the future at their present rates of enrollment. Statistics in Table 4 report that 57.4% of Korean-era veterans plan to continue their education at SAC during the first semester that their benefits expire. Apparently, those veterans who are already enrolled in college plan to continue their education even though their benefits will expire. But it only stands to reason that Korean-era veterans will not start their education after their benefits expire in June 1976. Therefore, Korean-era veterans enrolled should take a sharp drop i the Fall Semester 1976 because those veterans who are not presently enrolled in college will have no immediate monetary incentive to pursue a college education.

CONCLUSIONS

The main conclusion that can be drawn from the analysis of the veterans questionnaire is that veterans who lose their benefits in June 1976 will continue their education for approximately the same length of time as those veterans whose benefits will continue. A reduced number of Korean-era veterans will begin their education after June 1976 because there will be no monetary incentive for them to do so.

The analysis also showed that veterans tend to have high persistence rates. It was discovered that 90% of the currently enrolled veterans plan

to continue at Santa Ana College next fall and 84% of these veterans will enroll in the spring. Translated into numbers; 3,915 of the 4,350 veterans enrolled in the Spring Semester 1975 will continue their education in the Fall Semester 1975, and 3,654 of the currently enrolled veterans will enroll in the Spring Semester 1976.

SANTA ANA COLLEGE

VETERAN QUESTIONNAIRE

Dear Veteran,

Please take a minute to answer the following questions and drop the card in the mailbox.

1. Your Santa Ana College perm number.

   └┴┴┴┴┴┴┴┴┴┘

   * If you can't remember your perm number, please give us your name and we will look it up for you.

   _____

2. Dates of Service:

   Entered: └┴┴┘ └┴┘ (Year Month)

   Released: └┴┴┘ └┴┘ (Year Month)

3. Approximately how many months of benefits have you used? └┴┘

4. How many total college units have you completed? (Include this semester) └┴┴┘

5. How many semesters have you attended Santa Ana College? (Include this semester) └┴┘

   How many summer sessions? └┴┘

6. How many more semesters do you plan to attend Santa Ana College? └┴┘

Check those that apply:

Fall 1975 └┘

Spring 1976 └┘

Fall 1976 └┘

Spring 1977 └┘

Fall 1977 └┘
